OnPoint Release 8.1

Release Notes - Web Version

Course Manager (OPCM)

Item #	Configuration Area	Functional Area	Testable	Issue Type	Summary	Description	Release Bundle
CORE-5490, CORE-6155, CORE-6156, CORE-6222, CORE-6224, CORE-6376, CORE-6377, CORE-6491	-	OPCM > Home	Yes*	Enhancement	Support for select SAs to move between slices on the same server	Support has been added for allowing one or more specific Site Administrator accounts to move between slices on the same server. When on a different slice from their own, these SAs are considered to not manage any groups or job codes and can see and manage all users on that slice. Management rights on the SAs own slice remain unaffected. To ensure security is maintained only OnPoint team members may give SAs the right to move between slices where appropriate and reviewed with the customer. * May be module or configuration dependant	8.1
CORE-6000	-	OPCM > Various > Reports	No	Enhancement	Corrected issue with multiple queued high impact reports	Previously if a customer had multiple high impact reports queued, data could be excluded from the later reports in some situations. This has been addressed.	8.1
CORE-5983, CORE-5894, CORE-6007, CORE-6141, CORE-6159, CORE-6163	-	OPCM > Users & Groups > Users & Managers > Select User > User Extra > Reset Password	Yes	Enhancement	Support for resetting user passwords from OPCM	Support has been added in OPCM to reset passwords on behalf of users, and the functionality in both OPCM and OPPM has been updated to clear the count of failed login attempts, set the user back to Active if they have another status, and send a password reset email to the user who can click on the embedded link to enter and confirm a new password. Users retain the ability to reset their own passwords via the "Forgot Password" function on the login page, and this remains the only password reset path for users without a valid email address defined. Customers utilizing SSO for access remain unaffected.	8.1
CORE-5995	-	OPCM > Users & Groups > Users & Managers > Select a User > Assignments	No	Enhancement	OPCM now indicates the source of external completions	To help administrators identify how content was completed, objects completed outside of the system via a supported integration will now have that called out on the "[Object] Status" pages accessible from the user Assignments tab in OPCM. For example, if an OPLS nugget is representative of and links to a LinkedIn Learning course, completing that course in LinkedIn will display "Completion via LinkedIn Learning" on the Nugget Status page in OPCM for the user.	8.1
CORE-5853	-	OPCM > Assessments > Reports > Report #1495	Yes	Enhancement	New "Answer Confidence by Test" report	For customers utilizing the Confidence module, a new "Answer Confidence by Test" report is available for reviewing the responses provided by users in confidence-enabled tests. For more information on the report please see the "Support for Answer Confidence" job aid.	8.1
CORE-6601	-	OPCM > Events & Activities > Reports > Report #1498 Event Summary by Date	Yes	Enhancement	Updates to the Event Summary by Date report	Updates have been made to the Event Summary by Date (#1498) report to include additional options for displaying Session level information in the results of the report.	8.1.5
EPICS-167	OPCM > Administration > Configuration > Customer > Degreed Configuration	Various	No	Enhancement	Support for integration with the Degreed LXP Platform	Support has been added for an API integration module to send user, object, and completion information to the Degreed LXP Platform and supporting deep linking back to the OPLS. This can be leveraged by customers who also use the Degreed LXP and wish to maintain user, object, and completion parity between the platforms. Please speak to an OnPoint Engagement Manager with any questions.	8.1
EPICS-166	OPCM > Administration > Configuration > Customer > General > Magento	OPCM > Administration > Configuration > Magento Administration / OPLS Objects	Yes	Enhancement	Magento module now supports Magento 2.0	OnPoint's Magento integration has been updated to support Magento 2.0. The process to send new and updated items to Magento has been streamlined to be actioned from the item pages in OPCM. Additionally transaction details have been added to the view in OPCM. If you are currently utilizing Magento please contact your OnPoint Engagement Manager for next steps to transition to Magento 2.0. * May be module or configuration dependant	8.1
CORE-6060, CORE-6061, CORE-6062, CORE-6081	OPCM > Administration > Configuration > Customer > General > Notification Retention Period	OPCM > Messaging	No	Enhancement	Notifications and emails now automatically archived after a delay	To prevent notification and email queues from becoming excessively large and slow to query, notifications and emails sent more than a configurable number of days ago are now automatically archived and removed from the queues. By default this period is 30 days, but this can be changed via the "*Notification Retention Period*" customer configuration. Pending notifications and emails, or those scheduled to go out in the future are only archived once they have been sent. Archived notifications and emails are stored in several new tables accessible to OnPoint should reporting be required.	8.1
CORE-5864, CORE-5865, CORE-5866, CORE-5867, CORE-6012	OPCM > Administration > Thumbnails, Badges & Images	OPCM > Various > Thumbnail Assignment	Yes	Enhancement	Thumbnail views now include "Thumbnail Origin" fields and filters	The views of thumbnails through OPCM have been updated to include if each thumbnail is Standard (downloaded from the central server via the Image Packages view), Customer (uploaded manually in OPCM), or Unknown (pre-dating the 8.1 update, treated as Customer thumbnails). This distinction and the associated filters allow administrators to more easily locate their desired thumbnails when creating or editing content without having to look through the full list of available thumbnails each time.	8.1

OPCommon (OPCommon)

Item #	Configuration Area	Functional Area	Testable	Issue Type	Summary	Description	Release Bundle
CORE-5991	-	OPMAGENTO	No	Enhancement	Support added for Magento 2.x eCommerce integration	A number of updates and configurations have been put in place to support and utilize Magento version 2. Please speak to your OnPoint Engagement Manager if you have any questions.	8.1

OP-Portal (OPPORTAL) and UI/UX

Item #	Configuration Area	Functional Area	Testable	Issue Type	Summary	Description	Release Bundle
CORE-6175	-	Custom Interfaces > Event Sessions > Withdraw	No	Enhancement	Support for a removal reason when withdrawing from an event session	Support has been added for including a "removal reason" when a user withdraws themselves from their assigned event session (if allowed). This functionality was previously only available via the Digital Classroom. Custom interfaces will need to be updated to support this feature.	8.1
CORE-6544	-	Clips Player support	No	Enhancement	Add in support for authentication for Clips	Update the OPUX authentication methods to allow for authentication from mobile apps to static files housed in a secure location on the customer server.	8.1.1
