	OnPoint Release 8.8 Release Notes - Web Version Enhancement = improvement to an existing system feature New Feature = new capability in the system										
Update = Improved Functionality											
Course Manager (O Item #	PCM) Configuration Area	Functional Area	Testable	Issue Type	Summary	Description	Release Bundle				
CORE-9629	-		Yes	Update	Grammar updates on OPCM Home	Minor grammatical updates have been made to the Pending and Licenses sections on the Home page, such as					
CORE-9760		OPCM > Home	No	Update	page Additional information added to	adding plurals and capitalization where needed. If the email or notification processing crons are stopped due to an error, the messages which appear on the	8.8				
CORE-STOD		or car a nome	140	opuate	queue error notifications	OPCM Home page have been updated to include more information.					
CORE-9676, CORE- 9779	-	OPCM > Home > LRS Viewer	No	Update	Optimizations added to LRS Viewer	Optimizations have been added to the LRS Viewer in OPCM to reduce delays when navigating between pages of statements.	8.8				
CORE-9595	-	OPCM > Home > Delete Requests	Yes	Update	Additional information added to	An Action/Information column has been added to the Deletion List view in OPCM to inform administrators	8.8				
		Pending			Deletion List view in OPCM	when a user or object has been added to the task queue for final deletion. This is to prevent the same user or object from being added to the queue multiple times.					
CORE-9477	-	OPCM > Home > Tasks	Yes	Update	Filters added to Task Monitor	The OPCM Task Monitor has been updated to include filters for task name, parameters, and status.	8.8				
CORE-9737, CORE-		OPCM > Home > Tasks	No	Update	Optimizations added to External	Optimizations have been added to the process to send xAPI statements to an External LRS, including ensuring	8.8				
9743, CORE-9744, CORE-9747					LRS integration	that it can only run once in a 24 hour period.					
CORE-9633, CORE- 9729	·	O PCM > System Configurations	No	Update	Separate config and queue added for registration emails	A new system configuration and queue have been added to control the Registration Email Processing Interval separate from the Message Processing Interval. This allows the email and registration queues to be processed addifferent intervals, which is helpful if registration emails need to go out more quickly than other system emails.	8.8				
CORE-10186		OPCM > Various > Assignments > User Selectors	Yes	Update	"Next" button greyed out on Execute step of User Selectors	When utilizing User Selectors for ad hoc assignments to an object, the Next button is now greyed out in the bottom left of the final Execute step. There is no following step, and admins complete the Selector by clicking on the "Execute" button prominently displayed in the center of the page.	8.8.3				
CORE-9572, CORE- 9596	-	OPCM > Various Objects > Select Object > Assignments > User Selector	Yes	Enhancement	User Selector support has been extended to objects	Administrators can now use the User Selector feature set to assign or unassign users to objects using available user information, custom fields, parameters, or memberships. The existing assignment options remain available and unchanged. Please see the User Selector feature guide for more information on how to utilize selectors.	8.8				
CORE-8653, CORE- 9641	-	OPCM > Various > Reports	Yes	Enhancement		The report generation process has been optimized to reduce memory usage and reduce report processing	8.8				
9641 CORE-9565		OPCM / OPPM > Various User Assignments > Test Results	Yes	Update	Process OPCM/OPPM test results view now displays links in place of	times. All standard (non-custom) reports have been updated to utilize this optimization. The test results view in OPCM/OPEM has been updated to no longer display text/huml assets as these could sometimes be quite large. The assets have been replaced with links which the administrator or manager can	8.8				
CORE-9505	-	OPCM > Various Objects > Triggers	Yes	Update	assets Trigger templates now entirely independent of original triggered	click to view the asset if needed. Originally a trigger template remained associated with the originating triggered notification, meaning if the notification was deleted the template would be as well. Templates have now been entirely decoupled,	8.8				
CORE-9664		OPCM > Various Objects > Select Object	Ves	Update	notification Sharing info added to "Assigned	meaning the template is not affected by deleting the original notification. The "Assigned To" sections on object Assignment tabs now includes a Sharing column, indicating the sharing	8.8				
CURE-3004		> Assignments			to" sections	status of each object to which the current object is assigned.					
CORE-9593		OPCM > Various Objects > Select Object > Information	Yes	Update	Creating a copy of an object now copies over parameters	Creating a new object using the "Copy As" function now also copies over any defined object-level parameters.	8.8				
CORE-9758			No	Update		A new OP-only slice configuration has been added for whether administrators are able to add, edit, or delete OPCM user notes (not user-created notes about content). This option sets whether the Notes tab appears within user profiles in OPCM and defaults to No, meaning the tab is hidden by default.	8.8				
CORE-9819		OPCM > Users & Groups > Users & Managers > Select a User > User Extra	Yes	Update	Evaluate Dynamic Memberships option added back to User Extra	The "Evaluate Dynamic Membership" option has been re-added to the User Extra menu in OPCM. It was removed in 8.7 builds during the transition to User Selectors.	8.8				
CORE-9630	-	Managers > Select a User > Assignments > Select Skill Profile or Curriculum >	Yes	Update	menu Renamed Skill Profile Termination page	When in a user's profile in OPCM, the "Skill Profile Termination" page has been renamed to "Skill Profile Status Change" to better reflect the function of the page and match the same pages for other object types.	8.8				
CORE-9567	-	Change Status OPCM > Users & Groups > Users & Managers > Select a User > Memberships	Yes	Update	Indication of user/manager added to org unit display on user Memberships tab	The "Organization Chart Assignment" section on a user "Memberships" tab now indicates whether the user is a member or manager of the indicated org unit. Previously admins needed to click into the org unit to view this information.	8.8				
CORE-9757			Yes	Update	Updated Access Options text for admins	To better reflect the available options, the "Cross Sike Access" button under User Extra for administrators in OPCM has been renamed to "Access Options". Similarly the "Administrator is allowed access to OPDoc " setting within Access Options has been renamed to "Administrator is allowed access to OPDoc on their home slice".	8.8				
CORE-10101	-	OPCM > Users & Groups > Groups > Dynamic Groups > User Selectors	Yes	Update	User Selectors can now be set to include Records	User Selectors have been updated to allow Record accounts to be included in the results. By default they continue to be excluded, but admins can now choose to include them by selecting "All (Including Records)" at the start of the selector if needed.	8.8.1				
CORE-9667, CORE- 9668, CORE-9669, CORE-9670		OPCM > Users & Groups > Groups > Select a Group > Information > Edit	Yes	Update	Option added to use Legacy functionality for Dynamic Groups	For those customers who do not wish to use User Selectors, a new "Membership Rule Version" option has been added to the group Information page for choosing whether a specific group will use the Selector or Legacy functionality for Dynamic Membership.	8.8				
CORE-9647	-	OPCM > Users & Groups > Groups > Select a Group > Dynamic Membership	Yes	Update	Support for automatically converting Legacy Dynamic Membership rules to User Selectors	In the 8.7 release, Dynamic Membership Groups were updated to use the new User Selector functionality in place of the legacy rules, with greatly expanded capability and ease of use. The release update now includes a process to automatically convert Legacy Dynamic Membership rules to the equivalent User Selector rules to maintain group continuity.	8.8				
CORE-9712	-	OPCM > Users & Groups > Groups > Select a Group > Dynamic Membership	Yes	Update	Updated help text for manual execution of Dynamic Membership rules	The help text that appears when manually executing Dynamic Membership Rules has been updated with additional information to better assist administrators with understanding the effects and purpose of the manual execution.	8.8				
CORE-9707, CORE- 9751	•	OPCM > Users & Groups > Groups > Select a Group > Dynamic Membership	Yes	Enhancement	1	Within User Selectors, admins can now add comparators of "Empty" or "Is Not Empty" to most rules to allow for checking if certain fields do or do not have values for users.	8.8				
CORE-9776, CORE-	-		Yes	Update	Record accounts now excluded	To avoid including record accounts in mass assignments or unassignments, user selectors have been updated	8.8				
9777 CORE-9734		Select a Group > Dynamic Membership	Ves	Lindate	from User Selectors	to always exclude records in all rule processing.	8.8				
CURE-9734		OPCM > Users & Groups > Groups > Select a Group > Dynamic Membership	Yes	Update	Updated User Selector Help text	The Help text within User Selectors has been updated to provide additional information and improved guidance for administrators.	6.8				
CORE-9675	-	OPCM > Users & Groups > Groups > Select a Group > Dynamic Membership	Yes	Update	User Selectors no longer include All Users by default	Previously newly created User Selectors defaulted to include All Users as an initial rule, which resulted in a group with all users if the admin did not make any other changes. This has been updated, and the groups now default to include no users.	8.8				
CORE-9652	-	OPCM > Users & Groups > Groups > Select a Group > Dynamic Membership > User Selectors	Yes	Update	Updates to User Selector editor	orehautt to include no users. User Selectors have received several updates, specifically updates to tab names, splitting manager rules from those for administrators, ensuring consistency of buttow widths, and resequencing the available rules under each tab. Collectively these changes make the interface more intuitive and similar to other views in OPCM.	8.8				
CORE-9632, CORE-	-	OPCM > Users & Groups > Groups >	Yes	Update	Validation check and messaging	User Selectors have been updated so that if a Dynamic Membership group is set with invalid User Selector	8.8				
9691		Select a Group > Dynamic Membership > User Selectors			added to Dynamic Membership User Selectors	rules (such as missing values in rules), the rules are not processed and a message is displayed to inform admins that one or more of the rules are invalid. A similar message is also displayed on the OPCM Home page, including the ID of the offending group(s).					
CORE-9438		OPCM > Users & Groups > Groups > Select a Group > Dynamic Membership	Yes	Update	Validation checks added to User Selectors	When building and saving User Selector rules for Dynamic Membership Groups, administrators are now notified if their rules are likely to have large numbers of users assigned, such as if a User Selector is created with a single rule for "Active" users.	8.8				
CORE-9599	OPCM > Users & Groups > Organization Chart	OPCM > Users & Groups > Users & Managers > Select a User > Memberships	Yes	Update	User Membership tab updated to support multiple Org Unit assignments	The user Memberships tab has been updated to support and display multiple org chart assignments for a user. Previously only a single org chart assignment was supported and thus displayed on this tab.	8.8				
CORE-9628, CORE- 9677		OPCM > Users & Groups > Organization Chart > Select a Node	Yes	Update	User filters added to org chart Managed Users tab	To help with managing org chart nodes, the Managed Users tab for an org node has been updated to include ID, Name, Role, and Status filters for the assigned users. Additionally user Role and Status have been added as oolumms in the view.	8.8				
CORE-9773		OPCM > Users & Groups/Skills & Games > Reports	No	Update	User bio info can now be included in reports #1432 and #1507	columns in the view. Reports #1432 "User Course Status Credit" and #1507 "Skill Profile Status Report by Group" have been updated to support including bio questions/answers as display options. These options only appear if a specific configuration setting is added by the OnPoint Support team.	8.8				
CORE-10065		OPCM > Users & Groups/Skills & Games > Reports > Report #1432 or #1507	Yes	Update	Reports #1432 and #1507 now show bio questions in defined	The bio questions included in the Display Options of reports #1432 and #1507 are now included in the defined bio questions sequence, rather than alphabetical order.	8.8.1				
	l			I.	sequence		l.				

CORE-9803		OPCM > Users & Ground > Penorte >	Yes	Update	User Foreign ID added to report	I ker Foreign ID has been added as a display option to report #1324 "I ker Access by Group"	8.8
	-	Report #1324			User Foreign ID added to report #1324	User Foreign ID has been added as a display option to report #1324 "User Access by Group".	
CORE-9922	-	OPCM > Users & Groups > Reports > Report #1521	Yes	Update	New report created for "Plus Admin Accounts" #1521	A new "Plus Admin Accounts" report #1521 has been created to display a list of administrators who have been designated as "plus" admins across all slices. This will allow admins to keep track of which admins have rights to navigate betwee slices. This report will only be available for customers who are using the "plus" admin functionality.	8.8
CORE-10167	-	OPCM > Users & Groups/Skills & Games > Reports	Yes	Update	New Display Options added to reports #1432 and #1507	Reports #1432 and #1507 have been updated to include new Display Options for object parameters, foreign source, and foreign ID.	8.8.3
CORE-10201	-		Yes	Update	Updated report #1432 to include CE credits as display option	Report #1432 "User Course Status" has been updated to include course "CE Credits" as an available Display Option.	8.8.3
CORE-10300	•	OPCM > Users & Groups > Reports > Report #1292	Yes	Update	Optimizations added to report #1292	Optimizations have been added to report #1292 "User Course Status" to optimize the return of results and eliminate unnecessary methods that caused the report to run slower.	8.8.5
CORE-9771	OPCM > Content > Assets	OPCM > Various > Sharing	Yes	Update	Updating sharing with an updated asset now republishes the replica	When an asset is updated for a shared object, updating the sharing now automatically overwrites the replica asset and republishes the replica object(s).	8.8
EPICS-229	OPCM > Content > Courses	Various	Yes	Enhancement	object(s) cmi5 support added to OPLS	The OPLS has been updated to include cml5 as a supported content type. cml5 courses can be created via the Content Wizard, after which they can be utilized in a similar manner to other course content types. The Wizard now allows you to select cml5 as a content type for any cml5 content you produce. cml5 playback requires Onhorin's new playback regine, Content Presenter.	8.8
CORE-9759		OPCM > Content > Courses / Nuggets> Notes	Yes	Update	Comments tab replaced by Notes tab for Courses and Nuggets	The Comments tab for courses and Nuggets in OPCM has been replaced with a Notes tab, allowing administrators to view, create, edit, and delete admin-only notes about each object. An html editor is available for specific formating of these notes.	8.8
CORE-9985	OPCM > Content > Courses > Select a Course > Assignments > Assessments	Mobile CellCast App > xAPI Course	No	Update	Removed intermediate status step when a user fails a test associated with an xAPI course	Previously if a mobile CellCast user failed a test associated with an xAPI course via the OPLS (i.e. not a test within the course itself), their status for the course was updated twice, once to Completed and then again to Failed. The intermediate step has been removed and the user status for the course is now set to Failed directly.	8.8
CORE-9563	·	OPCM > Content > Assets	Yes	Update	External foreign source assets can no longer be edited	Updates have been made in Course Manager to prevent the edit of external foreign source assets with a type of Video, Text/HTML, or Link. These assets are associated with nuggets imported into the system via a content integration, and editing them can cause issues in management or playback of the assets.	8.8
CORE-9626		#1522	Yes	Update	New report #1522 created for "Foreign Source Access History"	A new report #1522 "Foreign Source Access History" has been created to display the most and least accessed foreign source objects, aggregated by Foreign Source. Admins can select one or all Foreign Sources and a date range, then the report results will display the counts of accessed volucacessed objects, with options to drill down to view the access counts for each object from the Foreign Source.	8.8.1
CORE-10185	•	#1346	Yes	Update	report #1346	To better support a large number of courses, report #1346 "Course Progress for a specific course, for one or all groups" has been updated to utilize Select2 in the course dropdown.	8.8.3
CORE-10070	-	OPCM > Content > Reports > Report #1524	Yes	Update	New report created for "Foreign Source Found in Details"	A new report #1524 "Foreign Source Found in Details" has been created for reporting on where courses and nuggets from a specific foreign source are used within the system (assigned to groups, skill profiles, etc).	8.8.5
EPICS-250	OPCM > Assessments > Questions	Various	Yes	Enhancement	New Upload Media and Display Media question types	Support has been added for two new question types, Upload Media and Display Media. The Upload Media type is limited to Interactive Assessments, and requires users to upload a video, audio, or image file for review by their managers. The Display Media type can be used in any assessment, and is used to insert a video, audio, or image file into an assessment without requiring a response, useful for when multiple questions are related to a single media item. A feature guide is being written to assist administrators with utilizing these new question types.	8.8
CORE-9663	-	OPCM > Assessments > Tests / Questions	Yes	Update	Sharing column added to Tests and Questions lists	The Tests and Questions lists in OPCM have been updated to include a Sharing column, indicating which Tests and Questions are associated with a shared object. This column only appears if the slice is configured for sharing.	8.8
CORE-9621, CORE- 9655, CORE-9661	OPCM > Assessments > Tests > Select a Test > Assignments	OPCM > Various Object > Publish	Yes	Update	Update to publish processes for Media-type questions	The Course, Nugget, and Assessment Set publish processes have been updated to allow publishing objects with tests containing Media Display-type questions to be published, while preventing publish if they contain any Media Upload-type questions. This is because Media Upload-type questions are currently only supported in Interactive Assessments.	8.8
CORE-9649	-	OCPM > Assessments > Assessment Sets > Advanced	Yes	Update	Changed wording of Assessment Set "Visibility" config	The "- OPCV" label has been removed from the Assessment Set "Visibility" option to reflect that users can have access to Assessment Sets through other applications, such as Content Presenter or CeliCast mobile apps.	8.8
CORE-9620	•	OPCM > Assessments > Questions > Select a Question > Preview	Yes	Update	Previewing questions no longer auto plays the assigned asset	When in OPCM, previewing a question with a video or audio asset no longer auto-plays the asset. Administrators can play the asset if they wish.	8.8
CORE-9571		OPCM > Assessments > Questions > Assignments > Assets	Yes	Update	Pagination added to question asset assignment view	The page for assigning assets to a question in OPCM has been paginated to better support a large number of assets on a slice.	8.8
CORE-9569	-	OPCM > Assessments > Reports > Report #1518	Yes	Update	Report #1518 updated to include Assessment Set ID	Custom report #1518 "IRR Progress by Group" has been updated to include a new column for Assessment Set ID.	8.8
CORE-9578		OPCM > Assessments > Reports > Report #1519	Yes	Update	New custom report #1519	A new custom report #1519 "Test Answer Analysis - All Questions" has been created. This report is based on report 1407 with the same name, and is limited to displaying the assessments sets with a specific parameter.	8.8
CORE-10211	-	OPCM > Assessments > Reports > Report #1415	Yes	Update	Optimizations and object info added to report 1415	Optimizations have been added to report 1415 "Test Answer Analysis for All Questions - Multi Select" to return results in a shorter time. Additionally the report now includes the name, ID, and type of object through which each assessment was completed.	8.8.3
CORE-9706	-	OPCM > Events & Activities > Instructor- Led/Webinars > Classes > Sessions > Notes	Yes	Update	Visual indication added when saving Additional Session Information	When saving an edit to the Additional Session Information on the Notes tab of a session, an "Information Saved" message now appears to indicate to the administrator that their changes have been saved. Previously their changes were saved without such indication.	8.8
CORE-9348		OPCM > Events & Activities > Webinars > Select a WebEx Webinar > Classes > Select a Session > Instructors	Yes	Update	WebEx Meeting co-hosts now automatically added/removed when updating Alternate Instructors	The WebEx integration has been updated so that Meeting co-hosts are updated immediately when Alternate Instructors are added or removed. Previously adding or removing Alternate Instructors didn't automatically update Meeting co-hosts.	8.8
CORE-9908	-	OPCM > Events & Activities > Webinars > Event > Classes > Session > Instructors	Yes	Update	Additional session instructors can now only be added to webinars after first save	To prevent the generation of orphaned data, additional session instructors can now only be added to supported webinar integrations once the session has been saved for the first time.	8.8
CORE-8992	> Instructor-Led/Webinars > Select an Event	OPPM > Events > Select a Session	Yes	Enhancement	Managers can now set users to audit sessions	The session assignment page for users in OPPM has been updated to support auditing. Specifically if the event supports auditing, when selecting one or more users for assignment who have already attended a session, managers are given the additional option to assign the users as auditors instead of recertifying them or removing their previous session enrollment. In the 8.7 release users could only be set to audit sessions by administrators in OPCM.	8.8
CORE-10018		OPCM > Events & Activities > Instructor- Led/Webinars > Select a Replica Event > Advanced	Yes	Update	Edit button added to Advanced tab for replica Events	The options on the Advanced tabs of replica events can now be edited by administrators. Previously the Advanced tab of replica events did not allow any edits.	8.8
CORE-9243	OPCM > Events & Activities > Webinars > Select an Integration Webinar Event > Classes > Select a Session		No	Update	Failed external webinar updates no longer automatically deletes OPLS session	Updates have been made in OPCM so that when an external webinar session update fails the OPLS session is no longer automatically deleted. Previously failed updates caused situations where a session could exist in the external webinar system but not in the OPLS.	8.8
CORE-9997	OPCM > Events & Activities > Webinars > Teams Webinar	OPTeams	No	Update	Updated OPTeams to remove time offsets	The Teams integration has been updated to remove the time offset in times sent over to Teams. This is to accommodate for an issue in Teams where these offsets could cause incorrect session start times.	8.8
CORE-9577	-	OPCM > Events & Activities > Reports > Report #1114	Yes	Update	Foreign ID added as display option for report #1114	Report #1114 "Event Attendance for Multiple Groups" now includes a column for user Foreign ID as an available display option.	8.8
CORE-9970	-		Yes	Update	Updated report #1498 to include Event and Session status fields	Report #1.498 "Event Summary by Date" has been updated to include fields for Event Status and Session Status. These columns display the statuses of the event and session, and appear after the Event and Session ID columns respectively.	8.8
CORE-9754		OPCM > Skills & Games > Reports > Various Reports	Yes	Update	Skill Profile/Curriculum version number added as a display option for listed reports	The version number of skill profiles and curriculums has been added as an available display option for the top 6 most run skill profile/curriculum reports. These reports are: - #13G7 Skill Profile Progress Status by Group - #13B3 Skill Profile Status - #1447 Curriculum Detail Report by Org/Group - #1447 Skill Profile Percentage Completion by Group - #1470 Curriculum Progress Detail Report - #1510 Curricy/skill Profile Status Report by Group	8.8
CORE-9592, CORE- 9598	-	OPCM > Skills & Games > Skill Profiles	No	Update	Optimizations added to Skill Profile evaluation	Optimizations have been added to the Skill Profile evaluation check, improving system performance especially in situations where users have large numbers of Skill Profiles assigned.	8.8

CORE-10194	-	OPCM > Skills & Games > Reports > Report #1507	Yes	Update	Updated filter options for report #1507	Report #1507 "Curr / Skill Profile Status Report by Group" has received multiple filter updates, including replacing the custom field filter with a validated Classifications filter and allowing for selecting multiple skill profiles or curriculums to include in the report.	8.8.6
CORE-9564	-	OPCM > Messaging > Ad Hoc Notifications > Various	Yes	Update	Updated styling of Ad Hoc Notification Pages	The Ad Hoc notification pages have been updated to match recent style changes in other areas of OPCM. The options and functions available are unchanged.	8.8
CORE-9731	-	OPCM > Messaging > Ad Hoc Notifications	Yes	Update	Raised character cap for ad hoc	When sending ad hoc notifications to users via OPCM, the character count for push notifications has been raised from 140 to 250.	8.8
	OPCM > Messaging > Standard Notifications	OPCM > Home > LRS Viewer	Yes	Update	xAPI statements in standard triggers now always recorded	The trigger system has been updated so that if a standard trigger is set to send xAPI statements to the LRS, that trigger will always fire even if individual objects are set to override standard triggers. This is to ensure the appropriate statements are always recorded and not acidentially removed for an object but an administrator. xAPI statements are not required and can be removed from standard triggers if statements do not need to be recorded.	8.8
CORE-9748	-	OPCM > Messaging > Monitor Queues > All	Yes	Update	Links to other queues added to messaging queues	The Notification, Email, and Mobile Push Queue pages in OPCM now include quick links at the top of the page for navigating between the queues. This is helpful for when an administrator opens the wrong queue and needs to move to one of the others.	8.8
CORE-9789		OPCM > Messaging > Monitor Queues > Notifications Queue		Enhancement	Updated Notification Queue to display Item Type for ad hoc notifications	Previously the Notification Queue did not display an Item Type for ad hoc notifications to group or interactive assessment assignees. This has been updated, and notifications of this type now appear with the appropriate Item Type in the queue.	8.8
	OPCM > Administration > Configuration > Slice	OPCM > Content > Wizards	Yes	Update	Notification configurations now utilized by content wizards	The content wizards now utilize the following slice-level messaging configurations and apply them to newly created content: Notify Interval, Notification Start, Notification End, and Default Minimum Time.	8.8
CORE-10000	OPCM > Administration > Configuration > Slice > Course Manager	OPCM > Administration > Parameter Search	Yes	Update		The Parameter Search page in OPCM now utilizes the "Object Landing Page" slice config to determine whether administrators are taken to the Summary or Information taks when selecting an object from the results. Previously admins were always taken to the Summary tab.	8.8
CORE-9823	-	OPCM > Administration > Configuration > Slice > Login Access Options	Yes	Update	Updated informational text in Login Access views	To better inform admins as to the effect of their actions, the "Click to Assign" and "Click to Unassign" info text in slice Login Access views has been updated to "Click to Select" and "Click to Unselect" respectively.	8.8
	OPCM > Administration > Configuration > Slice	OPCM > Various Reports	Yes	Update	Updated all "Elmo" reports to utilize the record default config	All reports in the "Elmo" family have been updated to utilize the new "Include Records in Reports by Default" slice configuration (coming in 9.0, manually added for customers who need it before then). If that config is enabled, the "Record" role will be automatically selected to include Record accounts in the report. Customers who have not been in contact with OP about this are unaffected.	8.8.3
	OPCM > Administration > Configuration > Slice > Login Access Options > Assignment Launch	OPLogin > Login	Yes	Update	Assignment Launch feature now uses launch method specified in configuration	The Assignment Launch Login Access Option has been updated to utilize the configured customer playback method, either OPCV or OPCP. Previously the Assignment Launch always utilized OPCV.	8.8
9981	OPCM > Administration > Configuration > Slice > Welcome/Finish Messages	User Interfaces > Launch a Course	Yes	Update	Default Course Welcome/Finish Messages now utilized in OPCP	If a slice is set to use Object Messages, has a default Course Welcome or Finish message, and a Course does not have specific messages defined, then the default Course messages will be displayed in the Content Presenter application. Previously OPC only displayed course-specific messages and id not utilize the defaults. This relates to Content Presenter only.	8.8
	OPCM > Administration > Configuration > Slice > User Transcript Configuration	Various > User Transcript	Yes	Update	Object fields can now be hidden/rearranged for User Transcript	Object fields can now be rearranged and enabled/disabled for the User Transcript view. Previously the Object Name, Assigned/Completed Dates, and Status fields were always enabled and in fixed positions.	8.8
9703	OPCM > Administration > Configuration > Custom Fields > Skill	Curriculums > Information	Yes	Update	Skill Profiles & Curriculums	Five additional custom fields have been added to Skill Profiles and Curriculums, bringing the total to ten.	8.8
	OPCM > Administration > Configuration > Dashboards > Builder	Various > Analytics Viewer	Yes	Update	Foreign Source now supported as Nugget Duration disaggregation	The Nugget Duration analytics widget now supports disaggregating by nugget Foreign Source.	8.8
	OPCM > Administration > Configurations > Classifications	OPCM > Various	Yes	Enhancement	All object types now support Classifications	Classification support has been extended to all object types, allowing for defining the available Classifications, setting and filtering for Classifications for each object, and utilizing the Classifications to control display behavior in UIs. Previously Classifications were available only for Groups and Events.	8.8
CORE-9643		OPCM > Administration > Import / Export > Import Data > Import Users	Yes	Update	User Import once again allows users to be imported without activation emails being sent	On the spreadsheet User Import view in OPCM, admins are once again able to leave the Login Type as None, rather than requiring the selection of either Login/Password or SSO. This will import the users without sending them an access-appropriate activation email.	8.8

Corrected caching issue in LBS Viewer Advanced filter now applies to correct side on Diject User Assignment page Corrected duplicate Question Answers following dirular sharing Corrected error in group assignment. Object parameters now deleted with object Enter key now applies rather than resets Recommendations filter Corrected losaling issue with report filter pages Corrected losaling issue with report filter pages Corrected losaling issue with report filter pages Corrected view of uploaded activity files for nugget creation Corrected user count when filtering by Bio questions Updated OPCM to prevent duplicate user workaround Corrected issue in available users list for org chart assignment Corrected issue with User Selector nile processing Corrected user location assignment in OPCM	Corrected an issue which prevented the "Resource Intensive Report Results" page from loading. Corrected an issue where if a "plus" admin ran a report on another slice, they were previously provided data for their origin slice rather than the current slice. Corrected an issue on the DBject User Assignment view where the Available filters were being applied to the Assigned user list instead. Previously if a test was associated with a shared object, then assigned to a different object and shared back to the original slice, duplicate Question Answers would be created on the original slice. This has been addressed, and the duplicates are no longer created. Corrected a rare timing error which previously occurred when assigning a course to a user group which could cause a duplicate course assignment. Previously object-level parameters were not deleted when the associated object was deleted via OPCM; this has been addressed. When on the Recommendations view of an object, the enter key now applies the entered filters. Previously the Enter key reset the filters back to the default instead. Previously when on the Achievement slit for an object and selecting multiple users for whom to print certificates, only the first certificate would be generated with the defined background and the others would have a blank background. This has been addressed. Previously When the traver filter pages threw an enrori of the slice did not have at least one "plus" admin defined. This has been corrected. Corrected a URL error which prevented administrators from viewing updaded files on the Nagget Creation tab of the Activity Status view for users in OPCM. This logition only appears if the slice is set to allow the creation of learning nuggets from uplaaded activity files. When filtering the Event History for a user in OPCM. This bas been corrected. Previously all was bossible to create a user in OPCM. The user total at the bottom of the screen previously alwaysi displayed 0 users. This has been corrected. When assign	8.8 8.8 8.8 8.8 8.8 8.8 8.8 8.8 8.8 8.8

CORE-9490			Yes	Bug	Corrected column headers on Curriculum object assignment view	Corrected the display of column headers when assigning content to Curriculums in OPCM which previously displayed the wrong object type for some objects.	8.8
	OPCM > Skills & Games > Skill Profiles or Curriculums > Assignments	Various > Progress Boards	Yes	Bug	Corrected waypoints being created on Progress Boards for non- assigned items	Previously Progress Boards displayed all items in a skill profile or curriculum as waypoints, even those not assigned or available to the user via assign before/after rules. This has been corrected, and waypoints are now only created for those items actively assigned to the user.	8.8
CORE-9784	-	OPCM > Skills & Games > Skill Profiles or Curriculums > Copy As	Yes	Bug	Corrected copying Assign Before dates for Skill Profiles and Curriculums	Corrected an issue where copying a Skill Profile or Curriculum would not copy over Assign Before dates for assigned items. This has been corrected.	8.8
CORE-10095		OPCM > Skills & Games > Game Profiles	Yes	Bug	Corrected game tab navigation	Previously when viewing a game in OPCM, navigating to the Associated Objects tab and then to a different tab would "lose" the game and display information for the non-existent game with ID 0 instead. This has been corrected.	8.8.1
CORE-10247		OPCM > Administration > Display Hierarchy	Yes	Bug	Corrected hierarchy node content assignments	Corrected an issue which prevented the assignment of content to child hierarchy nodes.	8.8.3
CORE-10047	-	OPCM > Administration > Slice Administration	No	Bug	Corrected unintentional disabling	Previously saving changes to the slice administration page, would disable the User Bio feature for that slice. This has been corrected.	8.8
	OPCM > Administration > Configuration > Slice > User	OPCM > Users & Groups > Users & Managers	Yes	Bug		OPCM now appropriately requires address fields if Address is set as mandatory when creating or editing users. Previously the fields were marked with an asterisk but the user profile could be saved with empty address	8.8
	Fields Configuration OPCM > Administration >	Various > Analytics	No	Bug	Corrected loading of Nugget	fields (street, city, etc.). Previously the Nugget Duration analytics widget would not load if managed users did not have any nuggets	8.8
	Configuration > Dashboards	,		8	Duration widget when lacking	assigned. This has been corrected and now the widget will load with a 0 value.
