V7.5 is Out, with new Add-on Modules!

The OnPoint team announces the availability of OPLS version 7.5, along with several new optional modules designed to enhance our customers' overall learning environments.

We've also scheduled a few webinar sessions where our team will provide detailed demonstrations of the new features and updates included in this latest release so please check the schedule at the end of this newsletter to register to attend one of these sessions.

For now, let's take a look at some of the highlights for version 7.5.

New Zoom Web Conferencing Module (US\$2,500)

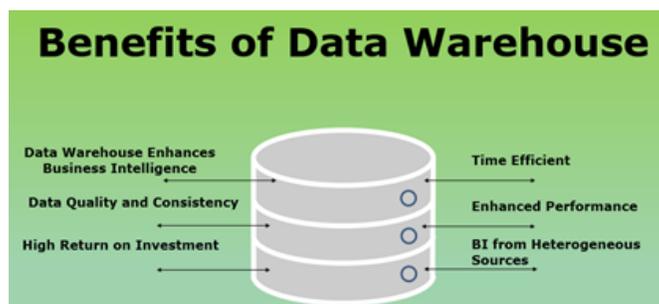

In addition to our Cisco Webex and Adobe Connect integrated webinar modules, OnPoint has completed an end-to-end integration with Zoom. Zoom's virtual meeting platform has grown in popularity this year due to the global pandemic, shifting many companies to use Zoom as a lower-cost alternative to the learning industry's other VILT offerings. The Zoom platform offers a very broad set of features and a modern, flexible API that allowed for a highly functional integration. There are different licensed levels of Zoom, from their free, personal versions up through their more secure, enterprise version. OnPoint's integration is

The Zoom module is offered at a one-time fee of \$2,500 (plus annual maintenance) and includes six hours of setup assistance.

Used in connection with OnPoint's updated Digital Classroom Module, the Zoom integration allows Administrators and Instructors to better plan and manage all of their virtual training classes and sessions, from pre-work training and assessments to in-class assignment and resource delivery to post-class activities and continued cohort communications.

Data Warehouse Lite (US\$5,955)

OnPoint's optional *Data Warehouse Lite* (DWL) module is our initial data warehouse offering for more data-centric customers. DWL has an easily understood and navigable schema designed for business analysts and other high-level data professionals needing immediate access to system detail.

The primary use case for DWL is the generation of reports and analyses through the use of off-the-shelf Business Intelligence (BI) tools such as Microsoft PowerBI, MicroStrategy, Tableau, SAS Visual Analytics, or similar software. OnPoint's DWL module provides customers with an alternative to accessing data from the core MySQL-based OnPoint Learning System (OPLS) database outside of the standard reporting, analytics and export tools they have access to through OnPoint's core Course Manager and Performance Manager applications. The DWL allows data administrators to gain direct access to much of the same data from the recorded actions and results stored in the OPLS and CellCast platforms, in a format and using tools one is already familiar with. And all DWL data is provided in a "read-only" format, so data in OnPoint's core LMS database is kept secure and cannot be added to, updated, or deleted through the DWL module.

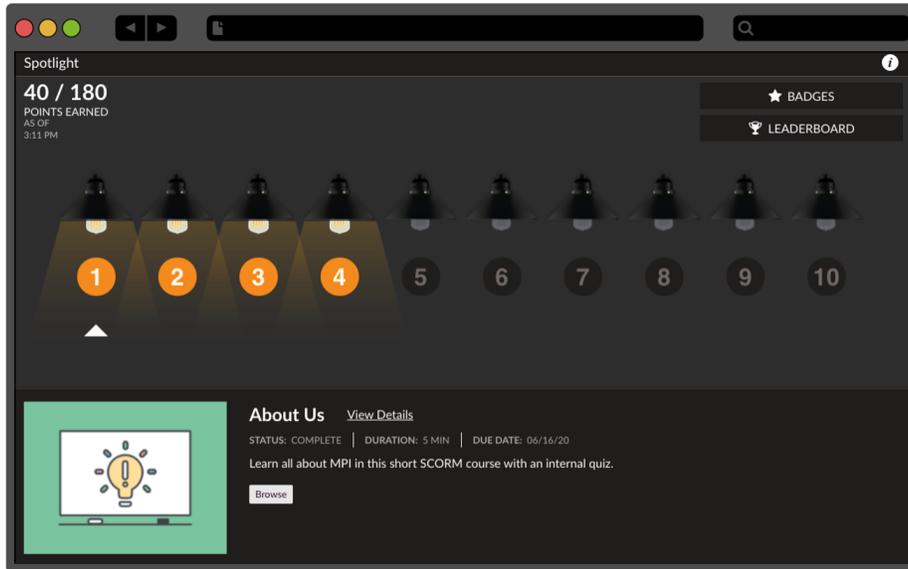

When a DWL is established, all relevant data is extracted from the OPLS database, transformed as needed, and loaded into a new DWL database. From that point forward, a

The DWL is offered at a one-time fee of \$5,995 (plus annual maintenance), and includes fourteen hours of data discovery assistance. The module does require a dedicated server to be added; standard server hosting fees are \$6K/year.

More Progress Boards & Gameboard Templates (included in release)

OnPoint’s Design Team continues to add new boards to the standard Progress Board and Gameboard libraries. These enhanced visuals allow Administrators to select an appropriate “look & feel” for any learning program they’re planning and deploy those elements to their user communities without needing assistance from OnPoint’s Design or Support Teams. Here are some examples of the latest boards you can use (NOTE: Gameboards require purchase of our Gamification Engine module).

New Spotlight and Gauges Gameboard Templates

Progress Board or Skill Profile/Curriculum description would go here. Room for a short paragraph or two.
