

OnPoint Release 9.6							
Release Notes - Web Version				Enhancement = improvement to an existing system feature New Feature = new capability in the system			
Course Manager (OPCM)							
Item #	Configuration Area	Functional Area	Testable	Issue Type	Summary	Description	Release Bundle
EPICS-334	-	OPCM > Various	No	Enhancement	Updates for WCAG 2.1 accessibility audit review	An umbrella effort to identify and address accessibility findings from the WCAG 2.1 audit review, improving the overall accessibility of the platform for users relying on assistive technologies.	9.6
CORE-12305	-	OPCM > All Objects > Recertify	Yes	Enhancement	Recertification can now optionally unarchive assignments as part of the process.	An option has been added to the recertification process to unarchive assignments at the same time. This streamlines bringing previously archived users back into active learning paths during a recertification cycle.	9.6
CORE-12771	-	OPCM > Various Objects > Advanced > Tags	Yes	Enhancement	Metatag origin is now captured and displayed in OPCM so admins can see where each tag came from.	When a tag is created and applied manually in OPCM or was applied by AI, the system now tracks and displays the tag's origin. Admin-created tags show an origin of 'Customer'; tags generated by AI from content show 'AI Keyword'. This gives administrators clearer context for how their tag library was built.	9.6
CORE-12756	OPCM > Administration > File Management > File Upload > Images	OPCM > Various Objects > Triggers > Add Notification > Images	Yes	Enhancement	Administrators can now upload image files to a customer-exposed web directory directly within Course Manager	A new capability allows admins to upload images to a designated /images/ct web directory through the administration area of Course Manager. This allows admins a place to add images that need to be shown externally in emailed notifications. The Notification creation process has also been updated to provide access to find and reference these image files directly in notifications.	9.6
CORE-12695	-	OPCM > Various Objects > Triggers > Notifications	Yes	Enhancement	Prevent images from being copy/pasted into the HTML Editor in OPCM.	Updates have been made to prevent images from being copy/pasted into the Notification HTML Editor functionality in OPCM. This was done along with the addition of new image hosting functionality for Notification Images to prevent binary image data from being added to the text.	9.6
CORE-12537	-	OPCM > Various Objects > Select Object > Information > Archive/Retire	Yes	Enhancement	The Archive/Retire prompt now displays pending retirements and supports cancelling pending tasks.	The Archive / Retire function has been updated to show if a scheduled retirement is present in the future for an object with the added ability to cancel that retirement action. This is specific to future scheduled retirements and removes all record of the scheduled action for that specific object.	9.6
CORE-12615	-	OPCM > Users & Groups > Select User > Skills	Yes	Enhancement	User skills now have their own dedicated tab in the user's record.	User skills have been moved from the User Extra list into a dedicated tab, giving admins a clearer view of a user's earned and assigned skills without the list becoming cluttered.	9.6
CORE-12667	-	OPCM > Users & Groups > Job Codes > Select Job Code > Associations	Yes	Enhancement	Admins can now associate one or more skills directly with each Job Code.	A new 'Skill Associations' section on the Job Code Associations page lets admins link skills from the available skills list to a job code. Skills can be added or removed without deleting them from the system, making it easier to align competencies with roles. This additional information would be used to display to admins and learners what skills are associated with a job, but would not grant those skills to the user.	9.6
CORE-12517	-	OPCM > Content > Reports > Report 1540	Yes	Enhancement	A new 'Content Use Summary' report 1540 has been added for visibility into how content is being consumed.	A new report 1540 has been created called Content Use Summary that provides summary information of content items that were created within the selected date range and includes information about the total number of assignments and completions. The report provides a single row for each object that was created in the time period and the summary assignment information specific to that object.	9.6
CORE-12686	-	OPCM > Events & Activities > Select Event > Classes > Sessions > Enrollment Tab	Yes	Enhancement	Inactive and Request Deleted user statuses are now visible on Event Session Enrollment views.	Event Session Enrollment pages now display Inactive and Request Deleted user statuses, giving managers and admins a complete picture of who was enrolled in a session regardless of the user's current state. The user status is indicated in () parentheses after the user's name on the Session enrollment pages.	9.6
CORE-12592	-	OPCM > Events & Activities > Select Zoom Webinar > Classes > Sessions > Enrollment	Yes	Enhancement	Session Enrollment pages for integrated ZOOM webinars now include a Participation Page link.	The Session enrollment page has been updated to provide a button that redirects admins to the new Session Participation page for Zoom Webinars. Previously there was a "check Zoom Participants" button that was no longer used and this has been replaced by a "Participation" button that opens the new Participation page that includes more information about ZOOM participants based on the returned API information. Requires that the Zoom Integration module has been purchased and enabled.	9.6
CORE-12657	-	OPCM > Events & Activities > Reports > Report 1392	Yes	Enhancement	The 'Assigned Activities by Group' report now lets admins show or hide the Download File column.	The Assigned Activities by Group report (Report 1392) has been updated to provide for selecting in the display options if the report should include a column for user provided uploads as part of the activity completion. If enabled, then the report shows a column for admins to download the individual files uploaded by the user for the Activity completion.	9.6
CORE-12690	-	OPCM > Events & Activities > Reports > Select Report > Show/Hide	Yes	Enhancement	Activity and Event Section reports now use the shared user-info handler and include the Hire Date option.	Reports in the Activity and Event sections have been migrated to the central user-information handler, ensuring consistent user data display and making future user-related updates easier to roll out. The filter page for these reports now includes the Hire Date option, with the Hire Date value appearing in the report output when selected.	9.6
CORE-12563	-	OPCM > Skills & Games > Skills Management	Yes	Enhancement	The OPCM Skills Management page now includes a 'Skill Origin' filter.	Admins can now filter the Skills Management page by Skill Origin, making it easier to distinguish skills of a specific source.	9.6
CORE-12691	-	OPCM > Skills & Games > Reports > Select Report > Show/Hide	Yes	Enhancement	Skill and Game Section reports now use the shared user-info handler and include the Hire Date option.	Reports in the Skill and Game sections have been updated to use the central user-information handler. The filter page for these reports now includes the Hire Date option, with Hire Date appearing in the report output when selected.	9.6
CORE-12568	-	OPCM > Administration > Configuration > Slice > User Transcript Configuration	Yes	Enhancement	User Transcript will allow users or managers to see additional information about a user's assignments	OPCOMMON User Transcript in OPCM has been updated to allow enabling new values such as Object Descriptions, User's Duration, and Layout changes to show Event Session detail.	9.6
EPICS-309	OPCM > Administration > Configuration > Dashboards	OPPM > Dashboards	Yes	Enhancement	New System Dashboard widget family introduced for user navigational insights	New widget families and individual widgets (Insights and Launches) have been created for the System Dashboards, giving administrators richer visibility into how learners are using the platform through dashboard widgets for user Portal navigation as well as assignment launch details.	9.6
CORE-12654	-	OPCM > Administration > Import/Export > Import Data > Bulk Assignment Management	No	Enhancement	Bulk Assignment Management now writes corresponding transaction records for full auditability.	An update has been made to the Bulk Assignment Management process to write corresponding records to the audit trail. This includes the following actions Assignment, Unassignment, Mark Completion, Update Due Date, Archive Assignment, Unarchive Assignment, Recertify Assignment, etc.	9.6
Content Presenter (OPCP)							
Item #	Configuration Area	Functional Area	Testable	Issue Type	Summary	Description	Release Bundle
CORE-12595	-	OPCP > WCAG Improvements	No	Enhancement	Accessibility improvements (WCAG 2.1 A/AA) for the OPCP (Content Presenter) module.	OPCP (Content Presenter) has been updated to address WCAG 2.1 Level A/AA findings, with improvements to focus visibility, focus order, heading structure, and link clarity throughout the module.	9.6
CORE-12828	-	OPCP > Activity	Yes	Enhancement	Completing an Activity in OPCP now immediately updates the learner's 'Skill Profile' status and curriculum progress.	When a learner completed an Activity in OPCP, their 'Skill Profile' status and curriculum completion percentage were not updating immediately in the portal – the update was being processed as a background task, causing a visible delay before progress reflected correctly. This was most noticeable when an Activity was the last item in a Skill Profile or curriculum. This has been corrected so that 'Skill Profile' status and curriculum progress are updated immediately upon Activity completion, without requiring a page refresh or waiting period.	9.6.1
User Experience (OPUX)							
Item #	Configuration Area	Functional Area	Testable	Issue Type	Summary	Description	Release Bundle
CORE-12545	-	OPUX > Portal	No	Enhancement	Removes unnecessary session validation checks when returning registered sessions.	Redundant session validation calls during session list retrieval have been removed, improving performance when retrieving a user's registered sessions.	9.6
CORE-12593	-	OPUX > My Profile > WCAG Improvements	No	Enhancement	Accessibility improvements (WCAG 2.1 A/AA) for the My Profile module.	The My Profile module has been updated to address WCAG 2.1 Level A/AA findings from the accessibility audit, including improved focus indicators, focus order, heading structure, link text, and page titling. These changes improve the experience for users relying on assistive technologies.	9.6
Performance Manager (OPPM)							
Item #	Configuration Area	Functional Area	Testable	Issue Type	Summary	Description	Release Bundle
CORE-12594	-	OPPM > WCAG Improvements	No	Enhancement	Accessibility improvements (WCAG 2.1 A/AA) for the Performance Manager (OPPM) module.	Performance Manager has been updated to address WCAG 2.1 Level A/AA findings, including visible focus indicators, proper focus order, descriptive link text, and improved heading and page-title structure. Users navigating with keyboards or screen readers will see a more consistent and conformant experience.	9.6
API Integrations (OPAPI)							
Item #	Configuration Area	Functional Area	Testable	Issue Type	Summary	Description	Release Bundle
CORE-12763	-	API	No	Enhancement	The /statuschange/updateDate API now supports additional query filters and an updated response schema.	Integrating systems calling the /statuschange/updateDate endpoint now have more granular filtering options and a richer response payload. This enables more flexible synchronization with external systems. See the API swagger for more detailed information.	9.6
OPAnalytics API (OPAnalytics API)							
Item #	Configuration Area	Functional Area	Testable	Issue Type	Summary	Description	Release Bundle
CORE-11646	-	OPCM - System Dashboards	Yes	Enhancement	A new User Experience – Launches widget that shows where users are launching content from has been added to the User Experience family in system Dashboards.	A new analytics widget provides insight into how users are launching content across the platform, broken down by source: Pages, News items, Hierarchy Nodes, and Skill Profiles or Curricula. The widget supports multiple visualizations (simple text, horizontal bar, vertical bar, and time-series breakdowns by source). The widget reads from a summary table for fast performance; as a summary widget, it does not support drill-downs.	9.6
CORE-12597	-	Analytics Dashboard > WCAG Improvements	No	Enhancement	Accessibility improvements (WCAG 2.1 A/AA) for the OP Analytics Viewer.	The Analytics Viewer has been updated to address WCAG 2.1 Level A/AA findings on the Analytics Dashboard and across the module. Improvements include restoring visible focus indicators on buttons and drill-down controls, correcting heading levels, providing meaningful link text, and updating the page title to use the active dashboard name when launched as a standalone window.	9.6
Zoom Integrations (OPZoom)							
Item #	Configuration Area	Functional Area	Testable	Issue Type	Summary	Description	Release Bundle
CORE-12316	-	OPCM > Administration > Configuration > Slice > Zoom Settings	Yes	Enhancement	Zoom configurations now support a Webhook Endpoint option.	Admins can now configure a Webhook Endpoint as part of the Zoom integration settings, enabling event-driven sync of Zoom attendance data into OPLS. This is specifically useful for setting up webhook options to receive an alert when a session has ended in order to retrieve attendance information instead of polling the ZOOM endpoints. Requires Zoom integration module purchased and enabled.	9.6
AI Services (Requires AI Services Module Purchase)							
*Yes - Only testable if module has been purchased and configured							

Item #	AI Feature/Module	Functional Area	Testable	Issue Type	Summary	Description	Release Bundle
CORE-12760	AI Services Layer > Document Manager	AI Usage logs > OPDoc	No	Enhancement	AI usage logs can now identify 'document' as an object type alongside courses and nuggets.	The AI usage log now supports 'document' as a recognized object type, allowing more accurate tracking of AI activity tied to OPDOC documents.	9.6
CORE-12672	AI Services Layer > Document Manager	OPCM > Administration > System Administration > Manage Slices > Select Customer > Modules	No	Enhancement	A new AI Module has been added for more granular control of OPDoc Extraction.	A separate AI module has been added for OPDoc extraction that controls the extract option, manages the extraction column, and provides title, description, and metatag suggestions within the information / edit of an extracted document.	9.6
CORE-12673	AI Services Layer > Document Manager	OPDOC > Object Upload	*Yes	Enhancement	A new Extract option has been added for OPDoc uploads	An update has been made to the process of uploading or creating new documents in OPDoc to allow for extracting the text from the document for AI purposes. This option defaults to a configured setting, and only appears when both the AI Services and OPDoc Extraction modules are enabled.	9.6
CORE-12664	AI Services Layer > Document Manager	OPDOC > Object Upload or Edit	*Yes	Enhancement	Admins can now generate AI-suggested titles, descriptions, and meta tags for documents.	OPDOC has been updated to include a feature that can generate suggested titles, descriptions, and metatags for documents. This is done by adding a new "Suggest" option on the Document Edit page for these fields, which is only visible when the document has a successful AI Extract.	9.6
CORE-12610	AI Services Layer > Content Discovery	OPCM > Content > Content Discovery > Extract Statistics	*Yes	Enhancement	Content Discovery now includes additional Tab to provide extract statistic information and charts	An update has been made to the Content Discovery to provide Extract statistics related to the types of extracted content and the status of those extracts. These statistics include information about the number of items extracted, the types, authoring tools and statuses of the extract process.	9.6
CORE-12543	AI Services Layer > Content Discovery	OPCM > Content > Content Discovery	*Yes	Enhancement	Content Discovery now includes an 'Include Semantic Matches' toggle.	Admins can now toggle whether Content Discovery includes AI-driven semantic matches in addition to keyword matches. This gives finer control over the balance between precision and recall in search.	9.6
CORE-12666	AI Services Layer > Content Discovery	OPCM > Content > Content Discovery	*Yes	Enhancement	An update has been made to OPCM Content Discovery to Pass Along Double Quotes in Search Requests against Extracted text from Courses and Nuggets	Search terms enclosed in double quotes are now passed through to Extract searches intact, enabling exact-phrase searches in Content Discovery. Admins get the precise matches they expect when using quoted queries.	9.6
CORE-12642	AI Services Layer > Content Discovery	OPCM > Content > Content Discovery	*Yes	Enhancement	Search results from Content Discovery can now be exported for offline analysis.	Admins can now export the results of a Content Discovery search, making it easier to review, share, and analyze search results outside the application. This export will provide the specific objects that were found as part of the search, but not the specific individual excerpts from each object.	9.6
CORE-12647	AI Services Layer > Preview	OPCM > Content > AI Extracted Course/Nugget > Advanced > Preview	*Yes	Enhancement	Admins now have access to a "Preview" Player button on the Course and Nugget Advanced Tab in OPCM for Extracted Content items.	Admins can now preview content directly from the Advanced tab of a Course or Nugget using the new Player option available for extracted content items. This should make it easier to verify content from Course Manager without having to assign and launch the content. No tracking of xAPI or SCORM statements occurs from this preview player.	9.6
CORE-12771	AI Services Layer > Meta tags	OPCM > Administration > Meta Tags > Origin	Yes*	Enhancement	Meta tags in OPCM now display their origin, showing whether each tag was created by an admin ('Customer') or generated by the AI engine ('AI Keyword').	OPCM now captures and displays the origin of each meta tag, giving administrators visibility into how each tag was created. Tags created manually by an administrator display an origin of 'Customer'. Tags generated by the AI engine and imported into OPCM display an origin of 'AI Keyword'. The origin is visible in both the meta tag list and the tag detail view, making it easier to distinguish between administrator-defined and AI-generated tags.	9.6.1
EPICS-339	AI Graded Essay Module	AI Graded Essay Module	*Yes	New Feature	Support for a new customer module has been added for "AI Graded Essay"	With the enabled "AI Graded Essay" Module, Admins can now configure Essay questions with a minimum character count and AI grading functionality. Admins establish the grading threshold for the essay question and this along with the minimum character count are used by the Test Template to determine if the user's response passed the identified threshold to mark the question as correct or incorrect. AI feedback and scoring are shown to learners in the test results view and incorrectly graded essays are marked accordingly during assessment grading. Requires that the AI Essay Review module has been purchased and enabled.	9.6
CORE-12561	AI Graded Essay Module	OPCM > Assessments > Tests > Questions > Essay Type	*Yes	Enhancement	Essay question creation and edit pages now show a Minimum Character Limit field.	When creating or editing an Essay question, admins can now set a minimum character limit. This works with AI grading and review features to ensure learners provide substantive responses.	9.6
CORE-12633	AI Graded Essay Module	OPCM > Users & Groups > Select User > User Extra > User Transcript AND OPPM > User Details > Select User > Options > User Transcript AND OPPortal > My Status > My Transcript	*Yes	Enhancement	Transcript Test Results view now displays the AI score and feedback for AI Graded Essay questions.	When reviewing a user's test attempt in the user's transcript, AI Graded essay questions (those flagged as both AI Review and Graded) now show the AI-generated score and feedback alongside the response. Standard essay questions continue to display as before, and other question types are unchanged. This gives admins consistent visibility into how AI evaluated each graded essay response.	9.6
CORE-12622	AI Graded Essay Module	OPCM > Assessments > Questions > Essay Questions	*Yes	Enhancement	Essay questions can now be configured for AI grading	A new 'AI Graded' option has been added to the question information for Essay questions. The option only appears when the AI Graded Essay customer module is enabled. This setting defaults to No and includes tip text explaining that AI Graded essays are evaluated against the configured threshold and minimum character count and automatically marked correct or incorrect based on the AI review. AI Review can still be enabled without AI Grading; AI Grading cannot be enabled without AI Review.	9.6
CORE-12854	AI Graded Essay Module	OPCM > Users & Groups > Select User > Test Scores > Select AI Graded Essay Test > View	Yes*	Enhancement	The Manager and Admin Test Results view now displays AI essay feedback and scores with clearer labels, consistent with the learner-facing results view.	The Test Results view in OPCM and OPPM has been updated to present AI essay feedback and scores in a clearer, more consistent format. The AI feedback section now displays with a header of 'Review Feedback' and the score is labeled 'Score (out of 5)', bringing the results view in line with the test results experience shown to learners. This applies to customers with the AI Graded Essay module enabled.	9.6.1
